H3 ADAPTIVE LUMINESCENT OPTIC TECHNOLOGY

# DEFIANCE

The tritium/fiber powered H.A.L.O H3F tactical sight line is the most reliable choice under any light and weather condition. The patented and unique fiber tritium combined technology ensures exceptional brightness and maximized accuracy for the shooter.

Engineered to exceed strength, durability and illumination specifications of LE/Military requirements, the H.A.L.O H3F addresses the specific needs of tactical shooters.

The front sight features an aiming halo point composed of pigmented optical fiber (light collector), protected by an aluminum sleeve and self-powered laser cut Triglighthouse™, while the rear sights feature two tritium dots configured in a "U" shape.

This combination allows fast focus and accurate target acquisition, even with fast light changing environment.

The H.A.L.O H3F line offers one of the brightest sights designed to withstand demanding conditions.

## H.A.L.O H3 ADAPTIVE LUMINESCENT OPTIC

- ▶ Permanent adaptive brightness
- ▶ Over 10 years of tritium gas powered light source
- ▶ Minimal maintenance
- ▶ Fast and accurate target acquisition under any light and weather condition
- ▶ Perfect contrast, even with fast light changing environment
- ▶ One of the smallest fiber tritium combined sight in the industry
